Milton Keynes is already a great economic success story. MK:Smart is working with University Campus Milton Keynes (UCMK) to engage with local businesses, building solutions to real-world issues and driving our smart city forward.

**Technical workshops**
If you’re a business interested in how the Internet of Things could be part of your growth, you can join a technical workshop using the ThingWorx platform. You can also access a wealth of training materials and the Thingworx developer environment, enrol on UCMK's Postgraduate Certificate in New Enterprise Creation, or find out more about its new MSc in Sensors and Smart Cities.

**Tap into the commercial value of city data**
The Apex Suite at UCMK can be used to host meetings, demonstrate technology, or simply connect with like-minded people. There’s an online portal to access services such as the MK Data Hub, gain remote support or promote a business via a case study. You can also start up a virtual machine to develop your own applications and products, and buy or sell applications or data feeds via the service management platform.

**Support**
Both technical and non-technical support is available online and by phone. UCMK uses an online ticketing system to answer FAQs, where you can ask for help solving a specific technical problem. You can also help develop a self-supporting community by contributing to the forum. Questions, answers, videos and other forms of media are all welcome.
